

Preparation

- **Print data** pdf data P1, P2 and P3
- **Printer** A4-size paper can be printed in color, P1 can be printed on one side, and P2 and P3 can be printed on both sides for a beautiful finish.
I think A4 thick paper is good. If you use copy paper, it may not be strong enough.
- **Paper craft paper** Scissors, cutter, design knife, etc.
- **Cutting tool** It is convenient to have it when using a cutter.
- **Cutter mat** Emulsion bond is easy to use.
- **Adhesive** It is convenient to have when making small parts.
- **Tweezers** Before separating the parts, trace the crease to make it easier to fold.
- **A dead ballpoint pen** Use for crease. When you use a cutter, it's made of metal.
- **Ruler** Convenient when applying glue to the tab.
- **Toothpick** Use the adhesive in small drops.
- **Aluminum cup**

Tips and Cautions on Making Paper Craft.

It seems easy to print on 0.20 mm (From medium to thick) paper.
You can cut it with scissors, but if you use an art knife, it will be finished beautifully.
So-called paper glue is not suitable because it takes time and contains a lot of moisture.
Tweezers are perfect if you have two types, one for stamps like in the picture and the other with a sharp point.
It is used to hold down the adhesion of small parts.

Assembly Drawing

Go to next page to explain how to assemble. →

Assembly Method Description

If you arrange them in numerical order, you can make them smoothly.

- ① R,L Lower Leg A/B/C: Both left and right are divided into three parts, A, B and C. Look at the arrow markings to make sure you don't make a mistake and paste them together. Crease and assemble so that the entire shape is tubular.
- ② R,L Foot: The feet are assembled in a box shape first, then glued together with the lower legs to form a single part. Please use this as a guide for assembly as the ① Lower legs are marked with the same mark.
- ③ R,L Thigh: The thighs are left and right with bent tubular shape. The right thigh is one part and the left thigh is two parts. After confirming the mark and gluing it to the tube shape, assemble it. Each is integrated with the left and right lower limbs. Glue the thighs together so that they are crossed.
- ④ Waist: Assemble the product by itself with care and attention to the markings, then attach it to the left and right thigh parts. It's not easy to assemble, but you don't have to be so nervous about it because it's a place to hide later.
- ⑤ R,L Shoes: Glue the front with the sole of the shoe, let the foot wear it, and then glue the back side. If you assemble them before putting them on, be careful not to put its feet in them. The legs are crossed, so don't mistake the left for the right.
- ⑥ Skirt: Be careful to glue it in a tube shape. put the waist inside the skirt and stick the top, then "Put up last" part assemble it. If you don't, its waist won't be able to fit into the skirt, so be careful.
- ⑦ Body Core/ Joint: After making a conical shape, align the arrows and attach the joint. Let it dry and then adhere it securely to the skirt lid.
- ⑧ Neck: When you assemble it, it becomes a cone shape. The tabs on the collar should be bent.
- ⑨ Chest, Collar: Make a loop around the neck. Once the glue is dry, glue the neck through the hole from the inside. The chest should be bent lightly and glued to the surface of the chest.
- ⑩ Upper Back: Attach the top of the upper back to the collar, then glue the armpits.
- ⑪ Lower Back: Attach the lower back to the upper back. When the upper body is dry, glue the ⑦ Body core to the inside of the neck.
- ⑫ Face / Top of head: Assemble the face and top of the head into a ball, and finally, assemble the neck part. When dry, stick it into the ⑧ Neck, adjust the angle and glue it. [Note] ⑬ Ears are not yet attached.
- ⑬ Hair: After assembling it in a round shape, put it over its face when it dries and adhere it securely. After drying completely, glue the ⑬ Ears to the face, aligning them with the gap sections of hair.
- ⑭ Right Arm: Assemble the forearms and upper arms in a tubular shape, then dry them and assemble them slightly bent at the elbows. When completely dry, press the upper arm into the shoulder hole in the body and glue it in place. Then stick the hand.
- ⑮ Left Arm: Make the same as the right arm. You can adjust the angle of your hand as you like.
- ⑯ Backpack set: After assembling the ⑰-1 Backpack body in the form of a box, assemble and paste the ⑰-4 Coin slot. After attaching the ⑰-6 Hook to the main body, attach the assembled ⑰-5 Handset to it. After strapping the ⑰-3 Grab Loop over the top and applying the top side of the ⑰-2 L,R Shoulder Strap, adhere the body to the back of the back, and after it is completely dry, apply the underside of the strap through the side and onto the backpack. (You don't have to carry a backpack on her back if you like.)
- ⑰ Cardboard Box L/ S: This is Mizusaki Robo. Each large and small is made into a box and pasted together. I don't think it's necessary to remove the round part.
- ⑱ Speech Bubble: As a bonus. Write your favorite dialogue and post it in an appropriate place.

It is now complete.
